

Construction Management

Professional Development Certificate (Noncredit)

Overview

Build your skills and knowledge to successfully supervise the construction process from the conceptual development stage through the final construction phase with a certificate in Construction Management. In this weekend and evening program at the Denver Learning Center, you learn skills that you can apply immediately to your coordination and management of people, materials, equipment, budgets, schedules, and contracts.

Students gain a comprehensive overview of managerial and technological aspects of the construction industry. You'll learn the in-depth content that is typically presented in undergraduate construction management programs, allowing you to improve your skills and prepare for career advancement without the commitment of a full degree program.

Construction Management was named by CNNMoney.com as one of the top 15 most lucrative careers in 2009.

Designed For

- Superintendents and managers without formal training seeking to advance in their careers
- Those transitioning into a career in home or commercial building
- Those preparing for a graduate program in construction management
