OVERVIEW
Post-Baccalaureate Pre-Health courses provide the opportunity to gain knowledge of fundamental science concepts, build an understanding for the integration of life science theories, complete prerequisite courses, and improve your grades in previously taken courses. After successfully completing the courses of your choice, you will have a more competitive application to submit to a health professional program admissions committee, and you will be better prepared to succeed once you are admitted. Many advanced health science degrees offered by medical, dental, pharmacy, optometry, veterinary, and physical therapy schools recommend or accept these courses, but students should verify that courses are acceptable to the programs where they are applying.

CURRICULUM
Take courses as your needs require, whether you are completing a course for the first time or looking to improve your grade in a previously taken course.

- BC 351 – Principles of Biochemistry (4 cr.)
- BC 353 - Pre-Health Genetics (4 cr.)
